TIKO — User Stories and Use Cases

Oct 10, 2026 · @ki

This document describes how people use TIKO: who they are, what they need to do, and what happens step by step. It is written for the MVP in the PRD and marks what waits for later releases.

Personas

Persona	Situation	Main need
Aarav, 22, final-year student	Irregular sleep, skips gym, impulsive food-delivery spending	Tiny daily tasks, a spending cap with a treat, no guilt on missed days
Meera, 28, software engineer	Long desk hours, forgets water and steps, wants a savings habit	Quick logging at her desk, a focus timer, a savings goal toward a trip
Rohan, 33, freelancer	Variable income, high stress, rarely journals	Two-tap mood check-ins, a weekly money summary, a calm tone

How to read the stories

Each story follows "As a user, I want X so that Y". Priority: **P0** must ship in the MVP, **P1** should ship in the MVP if time allows, **P2** is V1 or later. Acceptance criteria say how we will know it works.

User stories

Epic A: Onboarding and account

ID	Story	Acceptance criteria	Priority
A1	As a new user, I want to try TIKO without signing up so that I can see if it suits me.	Guest mode starts in one tap; data is kept on the device; a prompt offers signup after the first goal	P0
A2	As a new user, I want to pick 3 starter habits, one goal and its treat in under 2 minutes so that I start with something ready.	Setup is at most 5 screens; the Today screen opens with the first card ready to tap	P0
A3	As a user, I want to sign in with email link or Google so that I never manage a password.	Magic link arrives in under 60 seconds; Google sign-in works; guest data merges into the account	P0
A4	As a user, I want to export or delete all my data so that I stay in control.	CSV and JSON export; deletion removes data within 30 days with a confirmation step	P1

Epic B: Habits

ID	Story	Acceptance criteria	Priority
B1	As a user, I want to log water, a workout or a check-off habit with one tap so that logging never feels like work.	Tap updates the card in under 100 ms; works offline; shows a 10-second undo	P0
B2	As a user, I want timers for deep work and meditation so that the time is recorded for me.	Start, pause, stop; 25, 50 and custom blocks; the log is saved even if the tab closes	P1
B3	As a user, I want to enter my steps for the day so that my walking goal progresses.	Manual number entry; shows target and progress ring	P0

ID	Story	Acceptance criteria	Priority
B4	As a user, I want to create my own habit with a name, icon, mode and target so that TIKO fits my life.	Four fields; choose "build" or "limit"; appears on Today immediately	P0
B5	As a user, I want to pause a habit during travel or illness so that my streak is not punished.	Paused habits are hidden from Today and do not break streaks	P1
B6	As a user, I want to fix a mistaken log from the last 7 days so that my history is accurate.	Edit or delete a past entry; progress and goals recalculate	P1

Epic C: Goals and treats

ID	Story	Acceptance criteria	Priority
C1	As a user, I want to start a goal from a template so that I do not have to design one.	At least 10 templates; goal is created in 3 taps	P0
C2	As a user, I want to attach a treat I choose to each goal so that I have something to look forward to.	Pick from 30 starter treats or type my own; free and paid treats supported; skipping is allowed	P0
C3	As a user, I want to see a progress ring and gentle nudges at 50% and 90% so that I stay motivated.	Ring on Today and the goal page; nudge appears once at each point	P0
C4	As a user, I want a celebration when I finish a goal and a Claim button for my treat so that the win feels real.	Celebration appears the moment the target is met; Claim moves the goal to the Trophy shelf with a date	P0
C5	As a user, I want a missed goal to offer extend, shrink or restart so that I never feel I failed.	No failure screen; three options shown; the choice keeps my history	P0
C6	As a user, I want to repeat or raise a finished goal by about 10% so that I keep improving.	Offer shown after Claim; new goal pre-filled	P1

ID	Story	Acceptance criteria	Priority
C7	As a user, I want to see my Trophy shelf so that I can look back at what I achieved.	Grid of claimed treats with date and optional photo	P1

Epic D: Money

ID	Story	Acceptance criteria	Priority
D1	As a user, I want to log a purchase in two taps so that I actually record my spending.	Amount pad then one category chip; date defaults to today; saved in under 300 ms; 10-second undo	P0
D2	As a user, I want one monthly budget and a "safe to spend today" number so that I know where I stand.	Number equals remaining budget divided by days left; updates after each entry	P0
D3	As a user, I want to add repeat and recurring items once so that I do not retype rent or subscriptions.	"Same as last time" shortcut; recurring items post automatically	P1
D4	As a user, I want a soft warning near a category limit so that I can adjust before overspending.	Warning at 80% in a calm colour; never blocks an entry	P1
D5	As a user, I want a spending goal such as "under Rs 500 a day for 5 days" with a treat so that restraint is rewarded.	Limit goal type works with the budget; completion triggers the normal celebration	P1
D6	As a user, I want a savings goal with milestones so that I can celebrate saving along the way.	Name, target, optional date, manual contributions; treats at 25%, 50%, 75%, 100%; TIKO never moves money	P2
D7	As a user, I want a weekly summary of spending so that I notice patterns.	Sunday card: spent vs budget, top 3 categories, biggest expense, one gentle suggestion	P2

Epic E: Mind

ID	Story	Acceptance criteria	Priority
E1	As a user, I want a two-tap mood check-in so that I can record how I feel even on bad days.	Five-face scale plus energy level; saved in under 10 seconds; optional tags and note	P0
E2	As a user, I want a private journal so that I can write without worry.	Auto-save; body encrypted at rest; not shared or used for ads	P0
E3	As a user, I want a daily prompt and a three-line gratitude mode so that I know what to write.	One prompt a day; gratitude mode takes under a minute	P1
E4	As a user, I want a breathing exercise so that I can calm down quickly.	1 to 5 minute box breathing, full screen, reduced-motion friendly	P1
E5	As a user on a low-mood streak, I want the app to soften goals and offer support so that it does not add pressure.	After 3 low days: goals softened, streak counters hidden, a calm card with helpline information; no diagnosis	P1
E6	As a user, I want a mood calendar so that I can see my month at a glance.	Heatmap in Mind tints; tap a day to see its entry	P1
E7	As a user, I want gentle insights linking mood to habits and spending so that I learn what helps me.	Appears after 14 days of data; worded as observations, not advice	P2

Epic F: Engagement

ID	Story	Acceptance criteria	Priority
F1	As a user, I want a one-day grace in my streak so that one miss does not undo my effort.	One miss per 7 days is forgiven; two in a row break the streak; grace shown as a half-filled dot	P0

ID	Story	Acceptance criteria	Priority
F2	As a user, I want reminders at a time and tone I choose so that nudges help rather than annoy.	At most 2 a day; quiet hours 10 pm to 8 am; gentle, playful or minimal tone; push with email fallback	P0
F3	As a user, I want XP, levels and badges so that progress feels like a game.	XP per log; named levels; no negative points; no public leaderboard	P1
F4	As a user, I want a Sunday recap so that I see my week in one card.	Days logged, goals hit, treats earned, money saved, mood trend	P2
F5	As a user, I want to install TIKO on my phone and log without internet so that it fits my day.	Home-screen install; offline logs sync automatically within a minute of reconnecting	P0
F6	As a user, I want dark mode so that the app is comfortable at night.	Follows device setting; manual switch in Me; text contrast stays AA	P1

Key use cases

Each use case lists who starts it, the normal path, and what happens when something goes differently.

UC1: First goal and first treat (Aarav)

Trigger: Aarav opens TIKO for the first time. **Goal:** reach a first win within 7 days.

1. He chooses "Try without signing up" and picks three habits: water, gym, journal.
2. He picks the template "8 glasses of water for 7 days" and the treat "favourite coffee".
3. Today opens with a water card showing 0 of 8. Each tap adds a glass and the ring grows.
4. At 50% and 90% of the goal, a short nudge appears.
5. On day 7 the celebration screen shows the coffee treat; he taps Claim after enjoying it.
6. The goal moves to the Trophy shelf and TIKO offers to repeat it or raise it by about 10%. A prompt now offers to create an account.

Alternate paths: he skips the treat, so the goal still works and a treat can be added later; he misses day 4, so the grace day applies and the streak continues; he misses two days in a row, so the goal offers extend, shrink or restart with no failure screen.

UC2: Quick expense and safe-to-spend (Aarav)

Trigger: he pays for a food delivery. **Goal:** record it in seconds and see what is left.

1. He taps the floating add button and enters 320 on the number pad.
2. He taps the Food chip; the entry saves with today's date.
3. A toast shows "Saved. Undo" for 10 seconds, and the safe-to-spend number updates.
4. At 80% of his Food limit, a calm Notice card appears: "You are close to your food limit this month."

Alternate paths: wrong amount, so he taps Undo or edits the entry later; no connection, so the entry saves on the device and syncs later; he exceeds the limit, so entries are never blocked and the card suggests an adjustment.

UC3: Log offline, sync later (Meera)

Trigger: Meera logs water and a workout on a train with no signal.

1. She taps the cards; each update shows instantly and is stored on the device.
2. A small "Saved on this device" badge appears.
3. When the connection returns, TIKO syncs in the background and the badge disappears.
4. If a goal was completed offline, the celebration shows right away and is confirmed after sync.

Alternate paths: she edited the same entry on two devices, so the latest edit wins; sync fails, so TIKO retries and keeps the data on the device.

UC4: Mood check-in on a hard day (Rohan)

Trigger: the evening reminder. **Goal:** record mood without effort.

1. He taps a low face and "low" energy; it saves immediately.
2. He optionally adds a tag such as "deadline" and writes one line.
3. After three low days in a row, TIKO shows a calm card: gentle goals are offered, streak counters are hidden, and support information for his country is listed.
4. Goals shift to a softer target; nothing is marked as failed.

Alternate paths: he declines the support card, so it does not return for a week; he keeps normal goals, so the softer mode can be turned off in Me; his notes suggest self-harm, so the same calm card with helpline information appears, with no diagnosis and no lockout.

UC5: Goal completes and treat claimed (all users)

Trigger: a log meets a goal's target.

1. The goal engine detects completion in the same request as the log.
2. The celebration screen appears: ring completes, treat card rises, confetti in module colors.
3. The user taps Claim now or Later.
4. A claimed treat becomes a trophy with its date; XP is awarded and the new level is shown if reached.
5. TIKO offers to repeat the goal or raise it.

Alternate paths: she taps Later, so the treat waits on the Goals tab with a gentle glow; reduced motion is on, so the celebration uses a fade and no confetti; the log happened offline, so the engine runs on the device and reconciles after sync.

UC6: Weekly review (Meera)

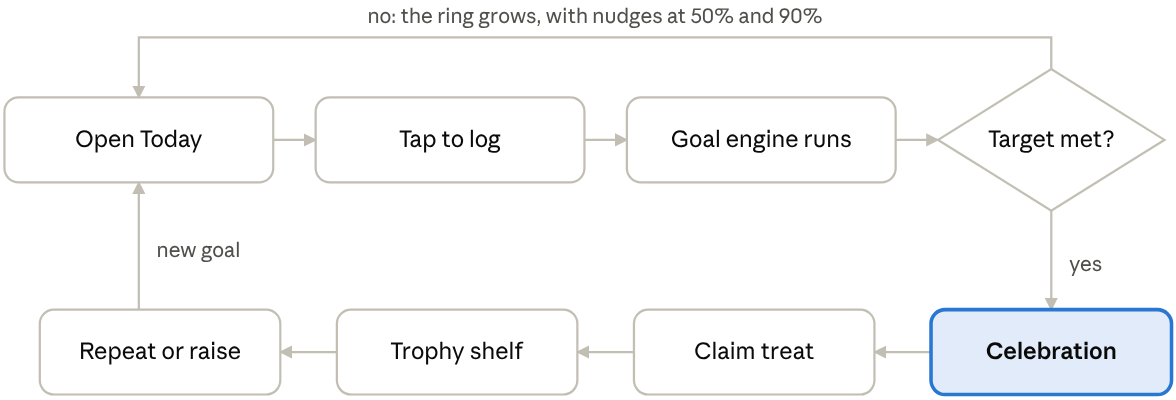

Trigger: Sunday evening. **Goal:** see the week and plan the next.

1. She opens the recap card: days logged, goals hit, treats earned, money saved, mood trend.
2. She sees one suggestion, for example raising a habit target by 10%.
3. She accepts, adjusts or ignores it; nothing changes unless she accepts.

Alternate path: a week with very few logs shows an encouraging message and offers to lower targets, never a score of failure.

Core loop

Every log runs the goal engine, so a treat unlocks the moment a target is met

core loop · log, goal check, celebration, claim, repeat

Every use case above runs through this loop: a log is saved, the goal engine checks all active goals, and either the ring grows or the celebration and treat appear, after which the user can repeat or raise the goal.
