TIKO — Project Brief and Vision

Oct 10, 2026 · @ki

Vision

TIKO helps people build better habits, spending and moods in under 30 seconds a day, and rewards every goal they reach with a treat they chose themselves.

The promise to the user is simple: log in one tap, see your progress fill a ring, and enjoy something you picked when the ring closes. Tracking should feel like collecting small wins, not doing homework.

In one line: **Log. Watch the ring fill. Claim your treat.**

Problem and opportunity

People who try to improve their lives quit their trackers within weeks, because logging takes effort and nothing rewards them for sticking with it.

- Logging takes too many taps, so busy or low-energy days get skipped.
- One missed day breaks a streak, and the user gives up.
- Habits, spending and mood sit in separate apps, so the connections between them stay invisible.
- Money apps lead with guilt and limits; habit apps lead with streak pressure.

Opportunity: one calm app for habits, money and mood, built around a reward the user chose, with forgiving streaks and a one-tap daily check-in. The reward is the hook; the low effort is what keeps people coming back.

Who it is for and what makes TIKO different

Target users: students and working adults aged 18 to 35 who have tried habit or budgeting apps and abandoned them. They are comfortable on a phone, prefer low effort, and respond to small, concrete rewards.

What TIKO does	Why it matters
Every goal ends in a treat the user picks	Motivation comes from something personal, not generic badges
Forgiving streaks: one grace day in seven, no failure screens	A missed day does not end the habit
Habits, money and mood in one place, each with its own color	Users see how sleep, spending and mood connect
One-tap logging, under 30 seconds a day	The effort stays lower than the reward
Calm, soft design with a linked-dot streak chain	A friendlier feel than gamified or finance-heavy apps

Scope

The first release is a responsive web app (PWA) that proves the loop of log, ring fills, goal completes, treat claimed, before anything else is added.

In the MVP (weeks 1 to 8)	Not in the MVP
Today screen with 7 core habits and a daily ring	Native iOS and Android apps
Goals with treats, celebration screen, Trophy shelf	Automatic step and health-app import
Quick expense add and a monthly budget with safe-to-spend	Savings goals with milestones (V1)
Mood check-in and a simple private journal	Social features, buddies and leaderboards
Forgiving streaks and daily reminders	Bank linking or any movement of money
Light and dark theme, offline logging	Coach-led programmes and extra languages (V2)

Success measures, brand, risks and next steps

How we will know it works (targets to validate with beta users)

Measure	Target
New users who complete a goal in their first 7 days	40%
Day-7 retention	35%
Day-30 retention	20%
Days per week the average user logs something	4 or more
Seconds from opening the app to the first logged entry	Under 10

Brand: TIKO is warm, calm and encouraging, never shaming. The logo is a T made of five linked dots, the last one a ring, which doubles as the streak chain. Colors are a cream base, a teal-blue brand color and four soft module colors (see the Design Document).

Biggest risks

- Users stop logging after two weeks. Answer: tiny goals, forgiving streaks, smart reminders and a Sunday recap.
- Four modules can sprawl. Answer: strict MVP scope and one shared goal engine.
- Mind and money data are sensitive. Answer: encrypted journal, minimal data, no ads, no data sales, and a clear self-care disclaimer.
