TIKO — Requirements Document (PRD v2)

Oct 10, 2026 · @ki

This is the master requirements document for TIKO, a web app that helps people build better habits, spending and moods in under 30 seconds a day and rewards every goal with a treat they chose. It states what must be built, how well, and when it counts as done, and it replaces the first PRD as the single reference.

1. Purpose and document set

This document summarises the requirements and links to the detailed documents; where they differ, the detailed document wins.

Document	What it holds	Use it for
Project Brief and Vision	Why TIKO exists, users, scope, success measures	Alignment and decisions
User Stories and Use Cases	Stories, acceptance criteria, step-by-step flows	Planning sprints and tests
Functional Requirements	Numbered FR-IDs by area with priority	Building and testing behaviour
Design Document	Colors, type, logo, components, screens, tokens	UI build and Figma
Tech Stack	Chosen tools, architecture, build order	Engineering setup
This document	Goals, scope, non-functional requirements, assumptions, constraints, release criteria	Sign-off and release

What is new compared with the first PRD: a dedicated non-functional section with measurable targets, explicit assumptions and constraints, release criteria for each stage, and a simplified single-codebase architecture (see the Tech Stack).

2. Goals, scope and requirements summary

Product goals

1. Make daily logging effortless: a typical check-in takes under 30 seconds.
2. Make progress rewarding: every goal ends in a treat the user chose.
3. Keep users coming back: forgiving streaks and kind reminders, with no shame.
4. Treat sensitive data with care: encrypted journal, minimal data, no ads.

Target users: students and working adults aged 18 to 35 who have abandoned other trackers (personas Aarav, Meera and Rohan in the User Stories document).

Scope

In the MVP	Not in the MVP
Responsive web app (PWA), guest mode and sign-in	Native iOS and Android apps
Habits (7 core plus custom), Today screen, daily ring	Automatic step and health-app import
Goals, treats, celebration, Trophy shelf	Savings goals with milestones, bundle goals (V1 and later)
Expense logging, monthly budget, safe-to-spend	Bank linking or moving money
Mood check-in, simple encrypted journal	Social features, buddies, leaderboards
Forgiving streaks, reminders, offline logging	Coach programmes, extra languages (V2)
Light and dark theme	Plus plan billing (V1)

Requirements at a glance (counts from the Functional Requirements document)

Area	What it covers	P0	P1	P2
Account (ACC)	Guest mode, sign-in, onboarding	6	2	0
Habits (HAB)	Tracking modes, custom habits, Today screen, edits	5	6	1
Goals and treats (GOL, TRT)	Goal types, templates, progress, celebration, claim, Trophy shelf	13	3	1
Engagement (ENG)	Streak grace, XP, levels, daily ring, recap	2	5	3

Area	What it covers	P0	P1	P2
Money (MON)	Quick add, budget, safe-to-spend, limits, savings	7	4	3
Mind (MND)	Mood, journal, support card, heatmap, insights	6	7	1
Notifications (NOT)	Reminders, quiet hours, push and email	4	1	1
Offline and sync (SYN)	Install, offline log, sync, conflicts	5	1	0
Settings and data (SET)	Theme, export, delete, help, Plus unlocks	0	5	1

3. Non-functional requirements

Each target below is measurable so it can be tested before release. Targets marked "to validate" come from planning assumptions and should be confirmed with beta data.

ID	Area	Requirement	How to test
NFR-01	Speed	Today screen interactive in under 2 seconds on a mid-range phone over 4G	Lighthouse and real-device test
NFR-02	Speed	A log shows on screen within 100 ms of the tap and is saved within 300 ms	Performance trace
NFR-03	Reliability	Target availability of 99.5% per month (to validate)	Uptime monitor
NFR-04	Data safety	No log is lost when offline, closing the tab or a failed sync	Offline and failure tests
NFR-05	Security	All traffic over HTTPS; sessions secure and expiring; rate limits on sign-in and write routes	Security checklist and review
NFR-06	Privacy	Journal bodies encrypted at rest; analytics events exclude journal text and exact money amounts	Code review and data audit

ID	Area	Requirement	How to test
NFR-07	Privacy	Export and account deletion work end to end, deletion complete within 30 days	End-to-end test
NFR-08	Accessibility	WCAG 2.2 AA: contrast 4.5:1 for text, 48 px tap targets, visible focus, labels on icons	Axe scan and manual screen-reader pass
NFR-09	Accessibility	Honour the reduced-motion setting; no information by color alone	Manual check
NFR-10	Compatibility	Latest two versions of Chrome, Safari, Edge and Firefox; works from 360 px width	Cross-browser test
NFR-11	Offline	App opens and logs with no connection after the first visit	Airplane-mode test
NFR-12	Scalability	Supports 50,000 users on one database before redesign (to validate)	Load test
NFR-13	Quality	Goal engine, streak and budget calculations covered by automated tests; critical flows covered by end-to-end tests	CI report
NFR-14	Observability	Errors captured with Sentry; product events tracked without personal content	Dashboard review
NFR-15	Localisation	English at launch with currency and date formats ready for more languages	Manual check
NFR-16	Compliance	Review India's DPDP Act 2023 and GDPR needs before public launch (legal advice recommended)	Legal sign-off
NFR-17	Content	No shaming language; no medical, diet or investment advice; self-care disclaimer visible	Content review

4. Assumptions, dependencies, constraints and risks

Assumptions (if one is wrong, the plan changes)

- Users will accept a web app (PWA) at first instead of a store app.
- Web push permission is granted by enough users, otherwise email carries reminders.
- Manual step entry is acceptable until health-app import arrives.
- The product starts with one developer building part-time or full-time, which sets the pace.
- Indian rupees are the default currency; other currencies are supported by setting.

Dependencies

Dependency	Needed for	If it fails
Hosting (Vercel) and database (Neon or Supabase)	Running the app	Move to another provider; data export is built in
Auth provider (Auth.js or Supabase Auth) and Google sign-in	Sign-in	Magic link still works
Email service (Resend)	Magic links and fallback reminders	Switch email provider
Browser push support	Reminders	Email and in-app reminders
Payment provider (Razorpay)	Plus plan, V1	Delay billing; app stays free
Name check for TIKO (trademark, domain)	Public launch	Rename; logo and docs are easy to update

Constraints

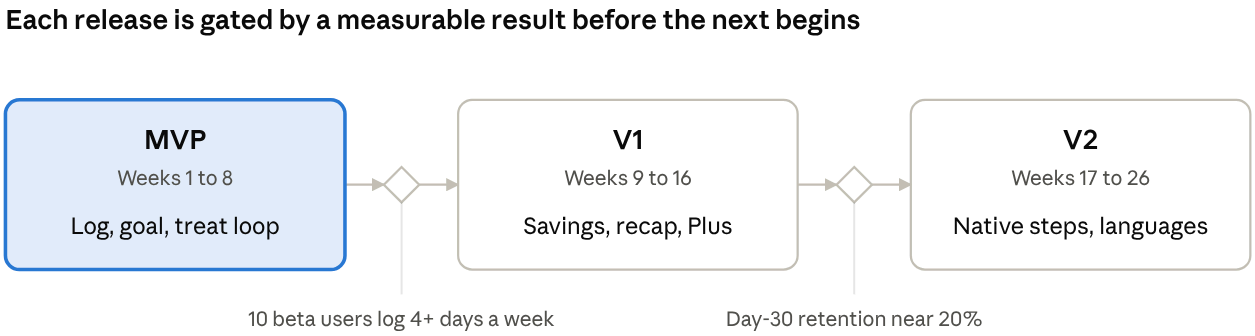

- Web cannot read pedometers, so steps are manual in the MVP.
- Mind features are self-care, not medical advice; no diagnosis anywhere.
- TIKO never holds, moves or links to money.
- No ads and no sale of data.
- Free-tier infrastructure limits apply until usage grows.

Top risks (full list in PRD v1 section 6)

Risk	Likelihood	Response
Users stop logging after 1 to 2 weeks	High	Forgiving streaks, tiny goals, smart reminders, weekly recap
Scope grows across four modules	High	Hold the MVP list; cut anything that adds logging steps
Sensitive data exposure	Low but severe	Encryption, minimal data, security review before launch
Mental-health content misread as therapy	Medium	Disclaimers, support card, expert review of copy

5. Release plan and acceptance

The plan has three releases, and each one starts only after the gate before it is met; durations are estimates for a small team and stretch if one person builds part-time.

release plan · 3 phases, 2 gates, not to scale

The MVP proves the log, goal, treat loop; V1 adds savings goals, the weekly recap, health-app step import and the Plus plan; V2 adds a native wrapper, more languages and coach-led challenges.

Release criteria

Release	Must be true to release
MVP (beta)	All P0 functional requirements pass their tests; NFR-01, 02, 04, 05, 06, 08, 11 pass; no open severe defects; privacy and disclaimer text reviewed
MVP (public)	The MVP gate is met; P1 requirements chosen for launch are done; DPDP and GDPR review complete (NFR-16); TIKO name check done
V1	The V1 gate is met; all V1 requirements pass; payments tested end to end; export and deletion tested
V2	Day-30 retention and activation targets hold for two consecutive months; native wrapper passes store review

Open decisions

- [x] ~~Confirm free plan limits (5 habits and 2 goals) and the Plus price after beta~~
- [x] ~~Choose countries and helplines for the support card~~
- [x] ~~Decide whether recurring expenses are in the MVP or V1~~
- [x] ~~Confirm light and dark theme both ship in the MVP~~
- [x] ~~Complete the TIKO trademark and domain check~~
- [x] ~~Decide the Plus plan price after beta feedback~~
